

## RESIFLEX GP 60 PUTTY – fast curing elastomeric rubber repair paste

Resiflex 401 GP 60 Putty is a two component fast curing solvent free urethane elastomer. The product has been specifically developed for repairs to a wide range of rubber surfaces such as Nitrile, Neoprene & Natural rubber.

- Fast curing
- Solvent free
- Flexible
- Simple and easy to use

### Typical Applications

Conveyor belts                      gasket sealing                      lining of process equipment

### Surface Preparation

#### Metallic Substrates – Mechanical abrasion

1. All oil and grease must be removed from the surface using an appropriate cleaner such as MEK.
2. All surfaces must be mechanically abraded using handheld grinders to **ISO 8501/4 ST3 (SSPC SP3 ST3)**.
3. Once abraded, the surface must be degreased and cleaned using MEK or similar type material.

#### Metallic Substrates – Abrasive blast cleaning

1. All oil and grease must be removed from the surface using an appropriate cleaner such as MEK.
2. All surfaces must be abrasive blasted to **ISO 8501/4 Standard SA2.5 (SSPC SP10/ NACE 2)** minimum blast profile of 75 microns (3mil) using an angular abrasive.
3. Once blast cleaned, the surface must be degreased and cleaned using MEK or similar type material.
4. All surfaces must be coated before gingering or oxidation occurs.

**PLEASE NOTE:** For salt contaminated surfaces the substrate must be pressure washed with clean water and checked for salt contamination, please refer to the surface preparation and pre-application guide for further information.

#### Concrete

1. If the concrete surface is contaminated, pressure wash using clean water.
2. Once the concrete is dry, lightly abrasive blast or scarify taking care not to expose the aggregate.

Once all surfaces, metallic or concrete, have been prepared, apply 402 Multi surface primer to all surfaces using a brush. Apply the primer as liberally as possible (avoid ponding) to the surface and leave to cure for a minimum of 20 minutes at 20°C (68°F).

### Mixing and Application

Prior to mixing please ensure the following:

1. The ambient & surface temperature is above 10°C (50°F°).
2. The ambient & surface temperatures are not less than 3°C (6°F) above the dew point.

Once these 2 checks have been met, please proceed with mixing the product.

1. **Resiflex 401 GP 60 Putty** is supplied in a 420gm cartridge with the base and activator components already pre-measured.
2. Heat the cartridge to 20-25°C prior to use.
3. Cut off the end of the mixing nozzle to ensure you have the largest dispensing capacity.
4. Unscrew the cap on the end of the 420gm cartridge and place in the cartridge gun.
5. Attach the mixing nozzle.
6. Dispense the mixed product onto the repair surface and smooth out the repair using the applicator tool provided.
7. **If required, Resiflex 401 GP 60 Putty can be used in conjunction with 808 reinforcement tape to create a multi-layered reinforcement system.**
8. If it is not practicable to heat the cartridge to 20-25°C, then do not use the mixing nozzle. Unscrew the cap on the end of the 420gm cartridge and place in the cartridge gun.
9. Dispense the base and activator components onto a clean mixing surface.
10. Using the green spatula provided, mix the base and activator components until you have a uniform mixture. Then apply the mixed material to the primed repair surface.

## Coverage Rates

420gm (400ml) of fully mixed product will give the following coverage rates –

0.4m<sup>2</sup> at 1mm

0.2m<sup>2</sup> at 2mm

0.133m<sup>2</sup> at 3mm

*Please note that the coverage rates quoted are theoretical and do not take into consideration the profile or condition of the surface being repaired.*

## Cure Times

At 20°C the applied materials should be allowed to harden for the times indicated below before being subjected to the conditions indicated. These times will be extended at lower temperatures and reduced at higher temperatures:

Usable Life	4-5mins
Touch dry	30 minutes
Light loading	1 hour
Full loading	4 hours
Immersion/chemical contact	24 hours

## Pack Sizes and Colour

This product is available in the following pack sizes –

420gm (400ml) cartridge

Colour – Black

## Over-coating times

Minimum - the material can be over-coated as soon as it is touch dry, approximately 1 hour at 20°C (68°F).

Maximum - the over-coating time should not exceed 36 hours.

## Storage Life

1 year if unopened and store in normal dry conditions (15-30°C)

## Other Technical Documents

Quick Application Guide	-	Hand Application
Safety Data Sheets	-	Base & Activator components
Product Specification Sheet	-	Technical Performance Information

## Health and Safety

Please ensure good practice is observed at all times. Protective gloves, goggles & a disposable coverall must be worn during the mixing and application of this product. Before mixing and applying the material ensure you have read the fully detailed Safety Data Sheet.
